

AUTOMATED-CLIENT-BOOKING-WORKFLOW-SYSTEM

Automated Appointment Booking & Workflow Automation System

This project focused on developing an automated customer booking workflow using Zapier, Google Forms, Gmail, Google Sheets, and Google Calendar. The automation streamlined appointment request intake, customer acknowledgment communication, and calendar coordination workflows.

The objective was to improve operational efficiency, reduce manual administrative workload, and create a more organized customer booking process for Nye's Lounge.

Tools Used

- Zapier
- Google Forms
- Gmail
- Google Calendar
- Google Sheets

Key Tasks Performed

- Built appointment request automation workflows
- Integrated Google Forms with Gmail and Calendar
- Automated customer acknowledgment emails
- Created operational scheduling workflows
- Streamlined booking intake processes

Findings

- Automation reduced manual administrative processes
- Centralized workflows improved operational organization
- Automated acknowledgment improved customer communication efficiency
- Workflow integration simplified appointment coordination

Recommendations

- Add automated availability checking
- Integrate CRM tools for customer tracking
- Implement automated re
